Mike,

I would like to take this opportunity to thank you and compliment AP Innovations, Inc (API) and AP Fabrications, LLC (APF) for the excellent work done in the planning, fabrication and installation of our biodiesel plant in Hayti, Missouri. It is my understanding from others in the industry that our plant came “on-line” far sooner than the industry norm. This for us translated into savings in capital outlay and actual start up costs associated with our project. The timely completion of the project followed by the successful plant startup and the training of our personnel allowed us to produce ASTM quality fuel quickly and consistently. I can say without reservation that both you and your employees went to and continue to go to great lengths to support our plant and personnel when we need assistance.

It is has been extremely important for our venture and to us as owners that we had support after the sale. Any time day or night (and weekends) yourself or someone from your organization has always answered the phone, and helped us when we had problems or needed advice. To our group this is something we can’t put a price tag on. We sincerely appreciate your help and feel that we have always received quality service from the staff at API/APF.

I personally appreciate the working relationship we have with you and the industry knowledge that you and your staff continue to share with us. We would recommend your companies (API and APF) to anyone interested in constructing a biodiesel facility.

Sincerely,

Bill Farley
